

## United Launch Alliance Honors Microwave Innovations with a Small Business Recognition Award

**Furlong, PA., (April, 2014)** – Microwave Innovations of Furlong, PA., has been honored with a 2013 Small Business Recognition award for its support of the Atlas V and Delta IV launch vehicles.

“Microwave Innovations has demonstrated outstanding support to ULA by the design, development, qualification, and production of the GPS S-Band Transmitter, a range certified component used in the GPS metric tracking system,” said Steve Furuto, ULA’s director of Subcontract Management and Procurement. “Your commitment to being a long-term partner through investment in additional equipment helps to ensure your ability to meet ULA’s production requirements.”

“Microwave Innovations is privileged to be a supplier to ULA,” stated the President of Microwave Innovations. “Our products have flown on several missions and will soon fly on all ULA missions. We plan to continue our legacy of providing innovative products and services to ULA. This award exemplifies the type of relationship which Microwave Innovations strives to enjoy with all of our customers.”

ULA’s Atlas and Delta vehicles support a wide range of missions including the Department of Defense Evolved Expendable Launch Vehicle (EELV) Program and NASA science missions, and are poised to launch the next generation of astronauts to the International Space Station.

The EELV program was established by the United States Air Force to provide assured access to space for Department of Defense and other government payloads. The commercially developed EELV Program supports the full range of government mission requirements, while delivering on schedule and providing significant cost savings over the heritage launch systems.

Microwave Innovations places a strong emphasis on supporting the launch vehicle, missile, and airborne programs, for both DOD/DOE programs alike with high reliability military grade electronics subsystems and components.

With nearly 20 years of heritage, Microwave Innovations is a premier supplier of flight RF electronics, and has successfully delivered 1000’s of transmitter’s and RF products to more than 50 high profile programs.
